Why Cloud Services?

Imagine if you could focus 100% of your time on fulfilling the strategic goals of your business.

With JDL Group cloud services, you can!

All businesses rely on information technology (IT) to be successful. Business success often hinges on IT resource availability and performance. One of the biggest challenges all businesses face is the cost of ensuring that their IT resources satisfy business needs. When IT resources are not available or if they perform poorly, employee productivity drops and the business' reputation with its customers suffers. But how does a business meet its IT needs in a cost and time effective manner?

Below are some examples of how JDL Group cloud services can help you address your IT needs so that your business can thrive!

Business Needs

Business Agility: Businesses can't wait for lengthy procurement and configuration of IT resources to satisfy customer or business needs. The reality is that businesses that are responsive to their customer's needs are likely to keep their customers. Customer responsiveness and satisfaction cannot be based on the availability of IT components. Businesses are more agile and responsive with JDL Group highly automated cloud services providing IT resources in near real-time.

Scalability: Many businesses experience unpredictable spikes where additional IT resources are needed but for just a short duration. It's cost prohibitive to permanently scale IT infrastructure to meet short term spikes. Why pay for resources today that might not be needed tomorrow? With JDL Group you only pay for the IT resources consumed. And you have the IT peace of mind knowing that if you need additional or fewer IT resources, your environment can be quickly adjusted.

Always On Support: Regular business hours are no longer 9 to 5. Whether it's your website or you have geographically dispersed customers and employees, your IT resources have to be available 24 hours a day. With JDL Group cloud services, the IT infrastructure your business relies on is monitored and managed 24x7x365.

Lower IT costs: Whether you're a CxO or you're responsible for supporting IT resources, the problem with the old school way of doing business is that it's just not cost effective. Most IT professionals are consumed by a never ending cycle of upgrades, refreshes, patches etc. just to keep the lights on. This "heavy lifting" can be avoided by using our highly reliable cloud services. We've invested the time and money in enterprise class infrastructure so you don't have to. Your business needs IT, but your business doesn't need the costs and headaches associated with never ending IT management and maintenance lifecycles. That's what we do.

Business Needs ...

Secure Environment / Disaster avoidance & recovery: In today's volatile world businesses are continually faced with the possibility of being negatively impacted by natural and/or human caused disasters. It's not a question of when a disaster will occur, it's a question of how prepared a business is to react to and recover from a disaster. JDL Group cloud instances are located in highly secure, geographically dispersed datacenters which provide you a level of peace of mind that's backed up with a 99.99% cloud infrastructure SLA guarantee. For extra insurance businesses typically leverage our business continuity services such as Backup-as-a-Service (BaaS) and Disaster-recovery-as-a-Service (DRaaS).

Simplified High Availability (HA) - Integrated HA failover and resilience is provided at both the virtualization (HA cluster) and hardware layers. There's no need for complex and expensive clustering software or additional server, hypervisor or application licenses for failover servers

What we do - Cloud Services you can start taking advantage of today!

Managed Public: This service provides the secure, and highly available Infrastructure as a Service (IaaS) environment businesses need for all their applications - including mission-critical applications, complex, multi-tier applications, test/ dev environments, and less-demanding applications. The service leverages secure, shared infrastructure technology.

Managed Private: For businesses that require physical isolation at all levels of the cloud, this IaaS model provides a fully isolated, secure, dedicated private cloud.

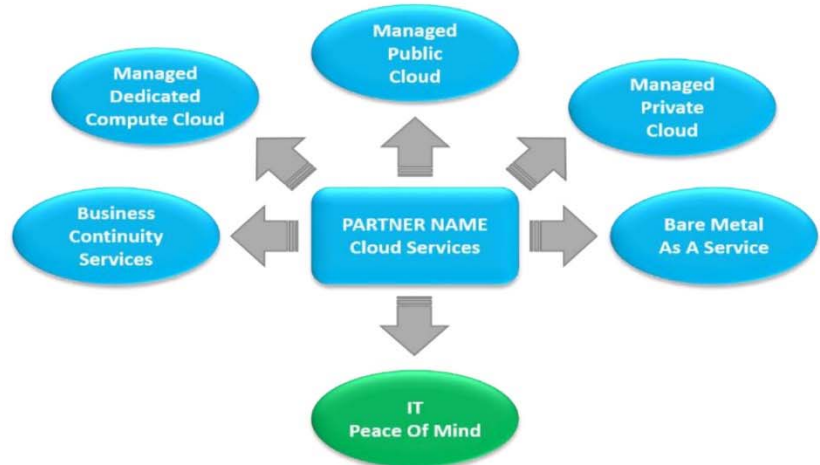

Bare Metal Servers: This service provides cloud computing benefits for applications not well suited for running in virtual machine environments.

Managed Dedicated Compute: Secure, dedicated cloud infrastructure for compute resource isolation. This service provides the security and performance advantages of in-house environments without the high capital costs and labor-intensive administrative efforts.

With drag-and-drop simplicity we provide businesses a dedicated compute platform that is ideal for custom services. This is the preferred cloud services model for businesses with applications that are not well suited for multi-tenant, shared compute environments.

Disaster Recovery As A Service (DRaaS): This business continuity service leverages constant data protection (CDP) technology to provide your business that extra layer of protection for your on-premise servers, or those servers running in our datacenters. This service provides businesses enhanced peace of mind and the ability to mitigate natural and human-caused disasters.

Backup As A Service (BaaS): This business continuity constant data protection (CDP) service provides automatic replication of storage devices. The service provides "set it and forget it" capabilities with restore points defined by time of day, date, month, and yearly. Retention periods can be easily configured for each restore point.

About JDL Group

We are a **One-Stop-IT-Provider**. Through our premier partnerships, we provide tailored solutions to your IT needs. One vendor, one solution – The JDL Group.

We partner with many types of businesses in the area, and strive to eliminate IT issues before they cause expensive downtime, so you can continue to drive your business forward. Our dedicated staff loves seeing our clients succeed. Your success is our success, and as you grow, we grow.
